Profile

Full Stack Developer with experience in over 25 projects, driven by a constant desire for learning and improvement. I have worked across various fields, from education management systems to e-commerce platforms, consistently growing and acquiring new skills. My passion lies in utilizing the latest technologies to optimize project performance and enhance quality. I am open to innovation, value teamwork, and strive to exceed customer expectations.

Employment History

Software Developer, International Balkan University

December 2023 — Present

I joined as a Developer in the Software Development Team at the university, actively contributing to the enhancement of the Education Management System. Additionally, I am spearheading the development of the university's new website, leveraging my skills to create an impactful online platform.

Full Stack Developer, threedots - KEITSolutions

January 2023 — December 2023

Collaborated closely with development teams to deliver high-quality projects meeting client requirements. Contributed to diverse application development in e-commerce, business management, and meeting platforms. Implemented latest technologies, optimized performance, and conducted code reviews to ensure top-notch quality and adherence to best practices.

Internships

Software Development Intern, International Balkan University,

Skopje November 2022 — January 2023

Teamed up with experienced programmers for user-friendly educational web interfaces. Developed the university's advanced website using React and diverse packages, leveraging the latest tech for improved functionality.

Education

Bachelor, International Balkan University

September 2019 — December 2024

Featured Projects

BulkyBook , Turkiye

BulkyBook is a sophisticated book e-commerce platform designed with a focus on empowering sellers and users alike. Sellers benefit from comprehensive tools to track, update shipping processes, and keep users informed about shipping statuses. Users, on the other hand, have the convenience of tracking their own delivery progress and receiving timely updates from sellers, ensuring a smooth and transparent transaction experience.

This application was crafted using N-tier Architecture and seamlessly integrated the Stripe payment method for secure transactions. Leveraging Entity Framework enabled flexible database operations, optimizing the code structure for enhanced efficiency. The deployment of the database in Azure ensures scalability and reliability. This project was dynamically presented to Kerem Ferati and Amra Feta, showcasing its robust features and capabilities.
